

Clinic Smart Scheduler

This plan is AI-generated. Make sure to review and change it to ensure accuracy. [Learn more.](#)

Business problem

Create an AI-powered clinic appointment management system.

The system manages patients, doctors, specialties, doctor schedules, and appointments.

Create the following Dataverse tables and columns:

Purpose of this plan

This plan serves as a blueprint for addressing the business problem described above, outlining the user requirements, data model, and technology that will be used to get things done.

User requirements

Patient

Individual who uses the clinic services for booking, managing appointments, and receiving care.

As a user, I need to:

- Book a new appointment with a preferred doctor or specialty so that I receive timely care.
- View upcoming and past appointments so that I can keep track of my medical visits.
- Update my personal information and preferences so that my records remain accurate.
- Cancel or reschedule an appointment so that I can adjust to changes in my schedule.
- Provide ratings and feedback for my doctor after a consultation so that I can share my experience.
- Request an escalation for unresolved appointment issues so that my concerns are addressed.
- Receive automated appointment reminders so that I do not miss my scheduled consultation.
- Search for doctors by specialty so that I can find the most suitable healthcare provider.

Clinic administrator

Staff member responsible for overseeing clinic operations, doctors, scheduling, appointments,

As a user, I need to:

- Manage patient and doctor records so that clinic information is current and accurate.
- Assign specialties and update doctor availability so that the appointment system reflects real-time data.

- Monitor appointment bookings and statuses so that the clinic operates efficiently.
- Handle escalation requests from patients so that issues are resolved promptly.
- Track and report on clinic activity, including appointments and feedback, so that management can make informed decisions.
- Enforce business rules for booking and availability so that data integrity and process compliance are maintained.

User processes

The processes for solving the business problem. Each process appears as a card next to this document.

Patient Registration and Profile Management

This process covers patient onboarding, updating personal information, and managing preferences to ensure accurate records and personalized care.

Doctor and Specialty Management

This process involves managing doctor profiles, specialties, and doctor availability to ensure the clinic's resources are up-to-date and appointments can be scheduled accurately.

Appointment Booking and Management

This process encompasses searching for doctors, booking appointments, viewing appointment history, rescheduling or cancelling appointments, and receiving reminders. It ensures patients can access care efficiently and administrators can monitor clinic operations.

Feedback and Rating

This process allows patients to provide ratings and feedback after consultations, supporting quality improvement and enabling administrators to track service performance.

Escalation and Issue Resolution

This process handles patient escalation requests for unresolved appointment issues, including tracking, assignment, and resolution by clinic administrators to ensure patient concerns are addressed.

Compliance and Business Rule Enforcement

This process ensures that all business rules (such as unique patient phone numbers, doctor activity status, and slot limits) are enforced, maintaining data integrity and operational compliance.

Data model

The tables that will be used to store and provide information.

Patient

This table contains records of patient information

Doctor

This table contains records of doctor information

Specialty

This table contains records of medical specialties

Escalation Request

This table contains records of patient escalation requests

Clinic Appointment

This table contains records of clinic appointments

Doctor Availability

This table contains records of doctor availability schedules

Doctor Rating

This table contains records of doctor ratings and feedback

Appointment History

This table contains records of appointment status changes

Technology

The apps, flows, and other objects that will be used to solve the business problem.

Patient appointment portal ⓘ

Model-driven app

A structured app for patients to book, view, reschedule, rate, and escalate appointments, managing their clinic visits and feedback.

Clinic admin management ⓘ

Model-driven app

An operational app for administrators to manage clinic records, monitor bookings, oversee escalations, and enforce business rules.

Appointment reminder flow ⓘ

Power Automate flow New

Automated reminders for patients to reduce missed appointments and keep consultations on time.

Appointment confirmation flow ⓘ

Power Automate flow New

Automatically sends confirmation notifications to patients after successful bookings for enhanced communication and satisfaction.

Appointment cancellation flow ⓘ

Power Automate flow New

Updates slot availability and notifies patients after cancellations to maintain data integrity and timely communication.

Appointment reschedule flow ⓘ

Power Automate flow New

Updates appointments and sends reschedule notifications, supporting patient flexibility and consistent scheduling.

Escalation notification flow ⓘ

Power Automate flow New

Sends alerts to clinic administrators when new escalation requests are created so issues can be addressed promptly.

Appointment history flow ⓘ

Power Automate flow New

Logs all appointment changes automatically in appointment history for accurate tracking and compliance.
